Re: Operable Unit Two of the Peterson/Puritan Superfund Site in Cumberland, Rhode Island

Dear Mr. Mann:

Pursuant to David Hird's March 15, 2004 e-mail request and our telephone conversation on March 29, 2004, enclosed are six CD-ROMs containing the Data Base Summary Report, which is a summary of new sampling data collected at the Peterson/Puritan Superfund site. The data on these CD-ROMs contain a compilation of the Phase 1A field work performed in 2003. This information reveals the presence of a number of hazardous substances at the site including: zinc, antimony, cyanide and vinyl chloride. A seventh CD-ROM is also enclosed. This disk, prepared by EPA, contains a series of scanned images of the monitoring location maps of the site.

As you may know, CCL Custom Manufacturing, Inc. is the performing party conducting the Remedial Investigation at the site through its contractor Shield Environmental Associates, Inc. ("SEA"). In addition to the Phase 1A data summary, EPA requires that SEA provide an Initial Site Characterization Report containing a detailed interpretation of these results. This document is still being drafted and is not ready to be released.

The Data Base Summary Report contains numerous tables displaying validated data results, geological, geophysical logging results and other data. Since there may be little explanation presented in the text, EPA is happy to provide assistance to you in your review of the data. Please feel free to contact David Newton, Remedial Project Manager, at (617) 918-1243 with any technical questions. If you have any legal questions, please feel free to contact me at (617) 918-1774.

Sincerely,

Michelle Lauterback
Enforcement Counsel
